

## OUR SERVICES

### RENTAL

- generating sets 1-2000 kVA
- light towers
- heat engines
- air compressors

### SERVICE

- scheduled and emergency maintenance
- generating sets
- heat engines
- air compressors

### SPARE PARTS

- generating sets
- petrol/Diesel engines
- heat engines
- air compressors

POWER GENERATION  
**gemap<sup>2</sup>**

**COMPRESSED AIR**

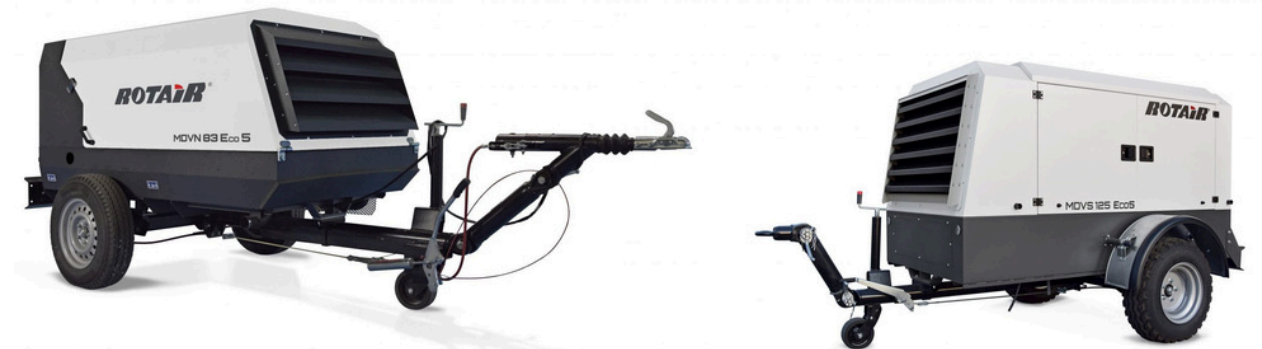

# PORTABLE COMPRESSORS

**Silent performance. Intelligent efficiency. Ready-made solutions for every application.**

The new generation of compressors is born from a completely redesigned concept, created to deliver a superior user experience in every operational context. Robust, modern and surprisingly quiet machines, designed to meet the most stringent international environmental standards and ensure continuous operation even in the most demanding conditions.

For applications requiring cold, clean and perfectly treated air, the range includes dedicated versions with an integrated aftercooler and condensate filtration system. An ideal solution for sandblasting, fibre optic laying and all specialist processes where air quality and reliability make the difference.

These compressors represent a strategic choice for those seeking efficiency, versatility and consistent performance, with the assurance of a product built to last and to add value at every stage of work.

# ROTARY SCREW AIR COMPRESSORS

**Efficiency, continuity and air quality for every industrial application.**

Rotary screw compressors represent a reliable, high-performance solution for all industrial operations requiring continuous, stable, high-quality compressed air. Thanks to their advanced design and proprietary technologies, these compressors deliver energy efficiency, reduced operating costs and superior longevity.

The range includes oil-lubricated and Class 0 oil-free models, designed to meet needs ranging from general-purpose applications to the most sensitive sectors such as food, pharmaceutical and electronics. Every machine is built to rigorous international standards and designed to operate reliably even under demanding conditions.

With consistent flow rates, low noise levels and simplified maintenance, ELGi compressors offer real value to those seeking production continuity and maximum efficiency. A strategic choice for companies looking to improve air quality, optimise energy consumption and ensure high performance at every stage of the process.

# DRYERS

**Consistent quality, guaranteed efficiency.**

We offer industrial solutions designed to ensure reliable and continuous air treatment, even in variable environmental conditions. These machines guarantee stable performance across a wide temperature range, effectively meeting the demands of modern production.

FMD series dryers are the ideal solution for all industrial applications requiring consistently high-quality compressed air. Designed to deliver high performance even in challenging environmental conditions, they ensure stable operation across a wide temperature range and efficient energy management.

Equipped with eco-friendly R513A refrigerant with low GWP, FMD dryers combine sustainability and performance, offering a modern alternative that complies with environmental regulations. The new ALU-DRY heat exchanger, compact and highly efficient, further improves the dew point and optimises the drying process.

The series integrates advanced electronic controls, Industry 4.0-ready, enabling continuous monitoring, intelligent condensate management and condensation control. The renewed, robust and functional design facilitates installation and maintenance, making the FMD a reliable and cost-effective choice for any system.

# AIR RECEIVERS

**Receivers designed to add value to every system.**

We supply pressure vessels for compressed air suitable for various applications, both stand-alone and within integrated systems. All pressure vessels and containers are tested in accordance with the relevant market standards.

In particular, we offer the complete range of vertical and horizontal compressed air receivers from 5 to 10,000 litres, manufactured in carbon steel and stainless steel.
